Fuels/Fire Potential

ERCs remain low across Utah, eastern NV and southeast ID in response to recent precipitation. Fire danger still remains elevated across Nevada and somewhat elevated across parts of western/southern Idaho where conditions have remained drier.

Monsoon moisture will continue to target the eastern half of the Great Basin on and off through next week, with fire danger indices remaining low.

Drier and warmer weather will impact Nevada into southwest Idaho, with fire danger indices continuing to increase through this week.

Sagebrush live fuel moisture has been decreasing over the western half of the Great Basin and is near or below seasonal low values.
